BSD Vision System

Upgrade For all Raptor machine models

ABOUT THIS RETROFIT

The BSD Vision System uses **two advanced vision cameras** to accurately detect the size, position, and rotation of the bottom sheet, ensuring sheets are placed correctly each time. This eliminates the need for operators to meticulously stack bottom sheets onto a cart, **reducing manual labor** and allowing operators to focus on other critical tasks. The BSD Vision System can be easily equipped to your Raptor, with quick install and easy touchscreen control.

Manual bottom sheet insertion is a menial and time-costly task for operators to perform, and can lead to improperly inserted sheets and increased downtime. Add the BSD Vision System to automate this process and reduce manual labor and human error.
