Corner Building

Software Upgrade For RaptorPAL With BBRs

ABOUT THIS RETROFIT

The Corner Building retrofit is a software solution designed to **increase building speed** for simple patterns such as 2x2, 2x3, and 3x4 without the need for a robot. This software retrofit allows bundles to accumulate in the corners and run straight through into the tier stacker. This upgrade not only increases the speed of simple pattern formation, but **increases the lifespan of the robot** by cutting out unnecessary movements.

This software-only can be easily installed and does not require any machine modifications, ensuring minimal downtime. If you are interested in increasing your RaptorPAL's speed and improving longevity, reach out to the Alliance sales team today.
